

Verification Statement for Abengoa on the Inventory of greenhouse gas emissions

Verification Statement of AENOR for Abengoa on the Inventory of greenhouse gas emissions corresponding to the year 2015

DOSSIER: 1993/0205/HCO/01

Introduction

Abengoa (hereinafter the company) commissioned the Spanish Association for Standardisation and Certification (AENOR) to make a reasonable revision of the inventory of greenhouse gases (GHG) of its activities included in the GHG report of 2015, which is part of this Declaration.

AENOR is accredited by Entidad Mexicana de Acreditación (OVVGEI 004/14) (entered into force on 31/10/2014; in effect until 31/10/2018), according to ISO 14065:2007, to conduct GHG verifications according to ISO 14064-3:2006 in the Energy Sector.

Inventory of GHG emissions issued by the Organisation: Abengoa, Campus Palmas Altas c/ Energía Solar, 1- Palmas Altas 41014 Seville (Spain).

Representatives of the Organisation: Fernando Martínez Salcedo, Sustainability Secretary, and José Manuel Delgado Rufino, Manager of the Corporate Control Department.

Abengoa was responsible for reporting its GHG emissions considered in accordance with the reference standard ISO 14064-1:2006.

Objective

The objective of the verification is to provide the interested parties with an independent and professional opinion on the information and data contained in the above mentioned GHG Report issued by Abengoa.

Conflicts of interest

AENOR states that there is no any conflicts of interest between the organization responsible of the GHG inventory and AENOR or any member of the verification team.

Scope of the Verification

During the verification the information was analysed according to Operational control approach. The company reports all the GHG emissions attributable to the operations under its control. In addition, the assets owned by Atlantica Yield and operated by Abengoa are included.

The scope of the verification is established for the activities carried out by the companies belonging to Abengoa as of December 31st, 2015 as detailed in Appendix I.

The scope of the activities of the company is identified in accordance with the guidelines of standard ISO 14064-1:2006 in direct and indirect activities.

Direct, indirect activities and exclusions from the verification.

Scope 1- Direct GHG emissions

Direct emissions occur from sources that are the property of or are controlled by Abengoa. These include:

- Stationary combustion sources
- Mobile combustion sources

ASOCIACIÓN ESPAÑOLA DE NORMALIZACIÓN Y CERTIFICACIÓN (AENOR), C/ GÉNOVA 6, 28004 MADRID

Page 1 of 11

R-DTC-500/01

- Process emissions
- Fugitive emissions

Scope 2 – Energy indirect GHG emissions

Indirect emissions are those derived from the activity but generated by other entities, including the emissions of the generation of electricity acquired and consumed by the company. These emissions are:

- Emissions associated with generating purchased thermal energy.
- Emissions associated with generating purchased electrical energy.

Scope 3- Other indirect GHG emissions

The rest of the indirect emissions are a consequence of the activities of the company, but occur in sources that are not the property of the company or controlled by it. These other emissions are:

- Business trips.
- Employee commuting to the workplace.
- Indirect emissions from losses during electricity transport and distribution.
- Indirect emissions due to the value chain of the fuels employed for the production of the electricity consumed.
- Goods and services purchased.

Exclusions

Abengoa companies have been able to exclude from their inventories those sources which imply a value less than or equal to 0,5 % of their total emissions.

Greenhouse gases taken into consideration

The greenhouse gases taken into consideration for the inventory are those defined under the Kyoto Protocol which can be divided into the following categories:

- Carbon dioxide.
- Methane.
- Nitrous oxide.
- Perfluorocarbons.
- Hydrofluorocarbons.
- Sulphur hexafluoride.
- Nitrogen trifluoride

Base year

Abengoa's inventory is the result of consolidating the inventories of its companies and each one of them define their own base year depending on their characteristics and, in this way, the perimeter variations are carried out at a subsidiary company level.

Materiality

For the verification it was agreed to consider as material discrepancies those omissions, distortions or errors that could be quantified and result in a difference of more than 5% with respect to the total of emissions declared.

ASOCIACIÓN ESPAÑOLA DE NORMALIZACIÓN Y CERTIFICACIÓN (AENOR), C/ GÉNOVA 6, 28004 MADRID

Page 2 of 11

R-DTC-500/01

Criteria

The criteria and information that have been taken into consideration to carry out the verification were the following:

- 1) Standard ISO 14064-1:2006: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals.
- 2) Standard ISO 14064-3:2006: Specification with guidance for the validation and verification of greenhouse gas assertions.
- 3) Internal Standard of Abengoa NOC-05/003 "Quality and Environment Management. Sustainability Management. Greenhouse gas emissions inventory"
- 4) Technical Instructions and procedures of Abengoa companies.

Finally, the "Abengoa Greenhouse gas emissions report 2015" was subject to verification.

AENOR waives any responsibility for decisions, regarding investment or of any other type, based on this declaration.

Conclusion

As a conclusion and according to the reasonable level of assurance agreed, AENOR states:

Based on the above, in our opinion *the information on the GHG emissions reported in "Abengoa Greenhouse gas emissions report 2015" is materially correct and is a fair representation of the emissions of its activities.*

Environment Manager: José MAGRO GONZÁLEZ

In consequence with this Declaration below is a list of the emissions data that were finally verified:

Scope 1

a) GHG emissions.

Scope 1 emissions-Greenhouse Gases			
Non biomass emissions (t CO ₂ -eq)		Biomass emissions (t CO ₂ -eq)	
Mobile combustion	112.703	Mobile combustion	2.492
Stationary combustion	1.847.890	Stationary combustion	1.417.312
Fugitive emissions	20.131	Fugitive emissions	0
Processes	155.084	Processes	1.869.201
Total	2.135.808	Total	3.289.005

Scope 2

Total emissions (t CO ₂ -eq)	
Electric energy consumption	535.872
Thermal energy consumption	101.938
Total	637.810

Lead Verifier: Raúl BLANCO BAZACO

Environment Manager: José MAGRO GONZÁLEZ

AENOR Asociación Española de Normalización y Certificación

Scope 3

Total emissions (t CO ₂ -eq)	
Acquired supplies	3.868.295
Business trips	31.465
Employee commuting	17.108
Electric energy distribution losses	76.177
Value chain of the fuels used to generate the energy consumed	82.763
Total	4.075.808
